RESEARCH EXPERIENCE

HKU, NAISS Lab (Synthetic Data)	Hong Kong, China
Student Research Assistant / Supervisor: Shinan Liu	2025.08 – Present

- TabQueryBench. A Query-Centric Benchmark for Synthetic Tabular Data.
- Developed a SQL workload-based framework. Evaluated 11 tabular generative models across 49 datasets, executing 100+ analytical queries per dataset.
- Schema-Aware Query Generation. Built a template-to-SQL pipeline grounding 44 reusable templates across 5 analytical query families into executable queries for heterogeneous tabular datasets.
- Main Findings. Identified systematic failures of the SOTA models in high cardinality support, local conditional structure, and rare-event preservation.

Tongji University (RAG in Job Market)	Shanghai, China
Research Intern / Supervisor: Yichao Zhang	2025.01-2025.10

- Knowledge-Grounded Recruitment Intelligence via RAG and Knowledge Graphs.
- Standardized 425K+ recruitment records. Constructed KG with 73K+ nodes and 316K+ relations. Built a RAG pipeline combining ChromaDB semantic retrieval with graph queries for job, skill, company, location, and industry search.
